

## Macintosh Setup - MacOS 8.5 and above Using Internet Setup Assistant

Thank you for selecting Spacestar Communications as your service provider. Please keep your username and password in a safe place to ensure that they are not used by anyone other than yourself or authorized users.

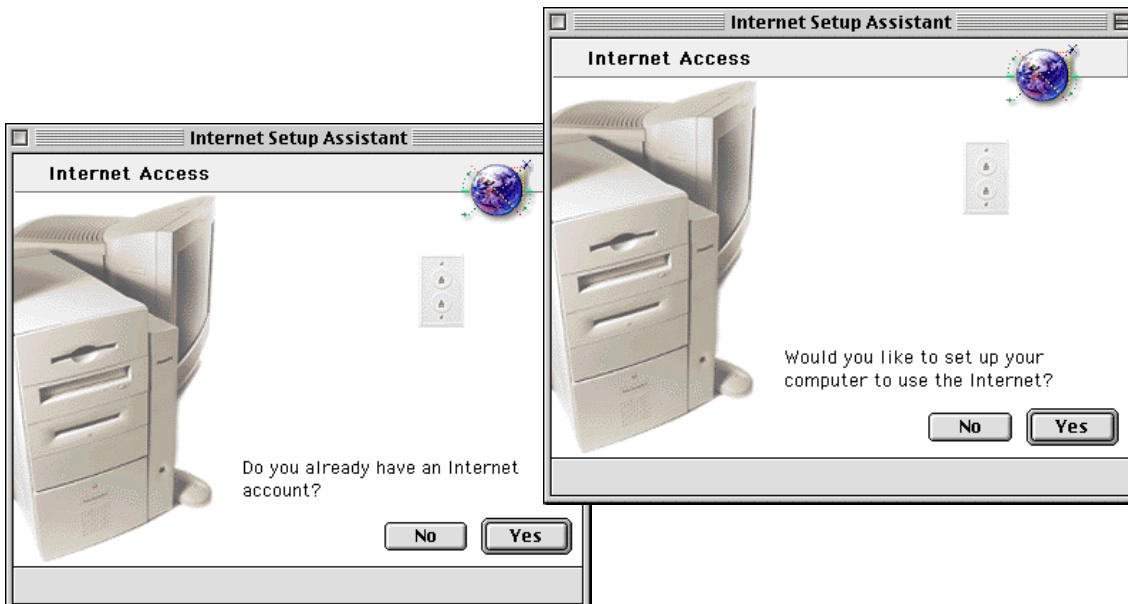

### Step 1: Getting Started

Open up the hard drive icon, usually labeled My Computer, and double click on the **Assistants** icon. Then double click on the 'Internet Setup Assistant'

### Step 2: Starting a new profile

Click 'YES' when asked if you would like to set your computer up on the internet, and then 'YES' again when asked if you have an internet account.

**Step 3: Introduction**

Step through this screen and proceed to creating the connection. You will want to call it *Spacestar*. Select **Modem** for the connection type, as you will be dialing into Spacestar

**Internet Setup Assistant**

**Configuration name and connection type**

What would you like to name this configuration?

For example, "home", "work", "On The Road". It is also common to use the ISP name.

You can connect to the Internet either through a phone line (using a modem) or through a network (as in a corporate office). If you plan to use Apple Remote Access to call into a local network, click 'Network'.

How will you be connecting to the Internet?

Modem  Network

Click the right arrow to continue.

**Internet Setup Assistant**

**Introduction**

This assistant helps you organize the information you need to access the Internet. Before you begin this process, you may need to contact your ISP or network administrator.

To add an Internet configuration, you will need to know the following:

- domain name server (DNS) addresses and/or domain name
- type of configuration (PPP, Ethernet, MacIP, or other)
- your Internet Protocol (IP) address, subnet mask, router addresses

In addition, if you access the Internet via a modem, you will need:

- your ISP's phone number
- your user name and password as registered with the ISP

Click the right arrow to continue.

**Step 4: Configuring the Modem**

Select the type of modem you are using in your computer and also the correct port. If you have voice mail on your phone line, you may want to select '*Ignore Dial Tone*'. If you have messages waiting, you will not be able to dial out until you retrieve them from the voice mail system. Proceed to the next screen. You will be asked for your local dial-up number, username and password. You can find your local dial-up number on the last page of these instructions. When you have completed this, proceed to the next screen.

**Internet Setup Assistant**

**Configuration information**

What is the phone number for this configuration? Your computer calls this number to connect to the Internet.

What name do you use with this service (also known as your log-in name or user ID)? Leave this field blank for guest access.

What is your password?

You can leave this blank, but you will have to enter your password each time you use the Internet service.

Click the right arrow to continue.

**Internet Setup Assistant**

**Modem Settings**

Which modem are you using?

Modem:

Which port is the modem connected to?

Port:

Does your phone line use tone or pulse?

Tone  Pulse

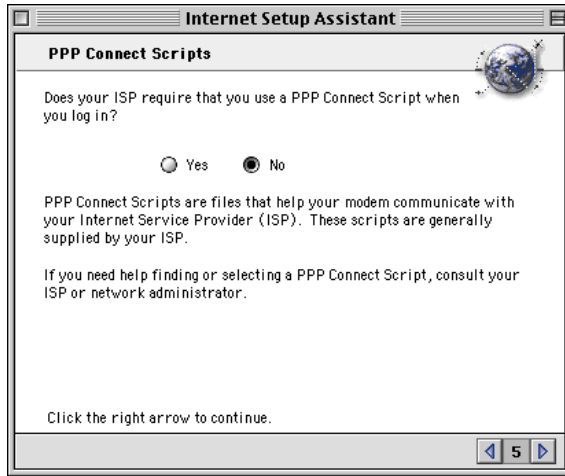

Ignore dial tone  
(Dial whether or not dial tone is detected.)

Click the right arrow to continue.

**\*\* If you are unsure which phone number is a local call, please contact your local telephone company to verify that no long distance charges will apply to your calls. Spacestar will not be held liable for long distance charges. \*\***

### Step 5: *Configuring the Network*

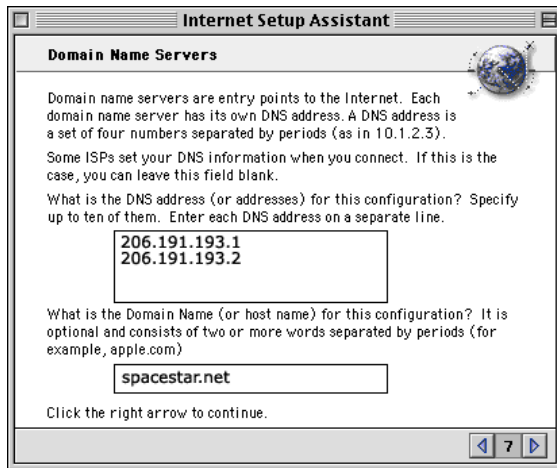

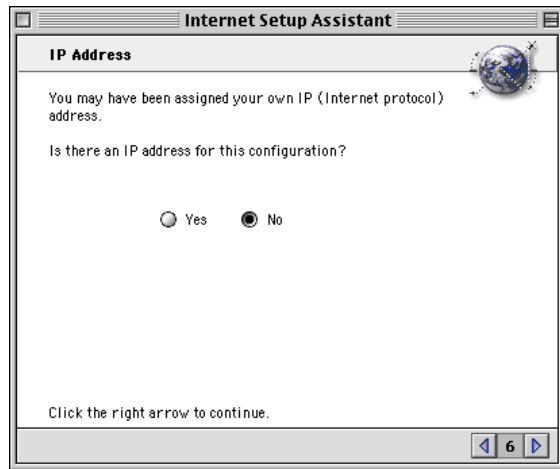

These steps will walk you through configuring the network components on your computer for the internet.

The service does not require that you use a PPP script to connect, so check this option 'NO' Click the right arrow to continue to the next screen.

Select 'NO' for this screen, as you are assigned an IP address automatically when you log on. If you wish to obtain a static IP address, (one that will never change when you log on) please contact Spacestar for more information.

Domain name servers are what look up the internet sites on the web and assign them to the IP addresses behind the names. Enter these two sets of numbers and the domain name below to ensure that you won't have any problems accessing web sites.

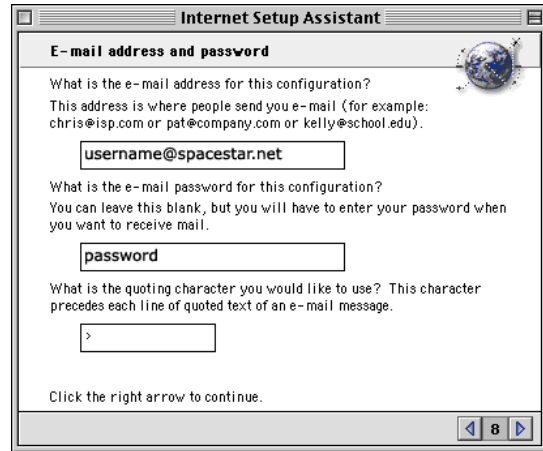

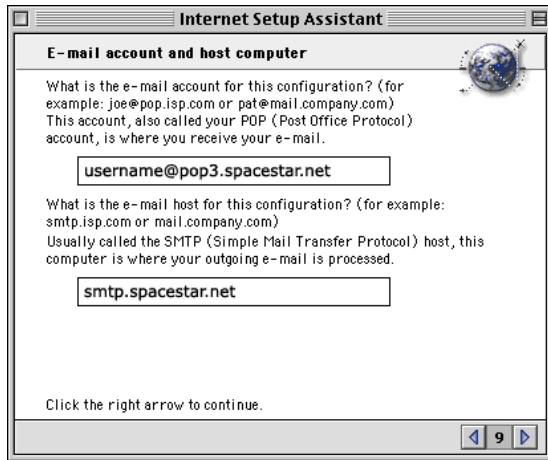

Click on the right arrow to continue to the next screen.

### Step 6: Internet E-Mail

These steps will guide you through setting up your E-Mail account. Doing this will allow you to send and receive E-Mail from friends and family.

Enter your username and password in the fields shown to the right. You can leave the default quoting character as it is. Click the right arrow to continue.

To the left are your mail server entries. Your incoming mail server for Spacestar is:  
**username@pop3.spacestar.net**

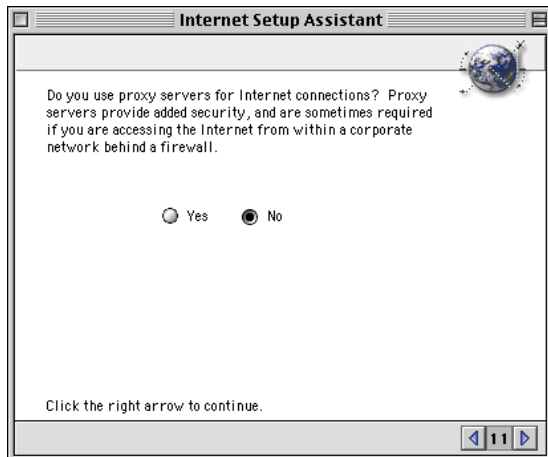

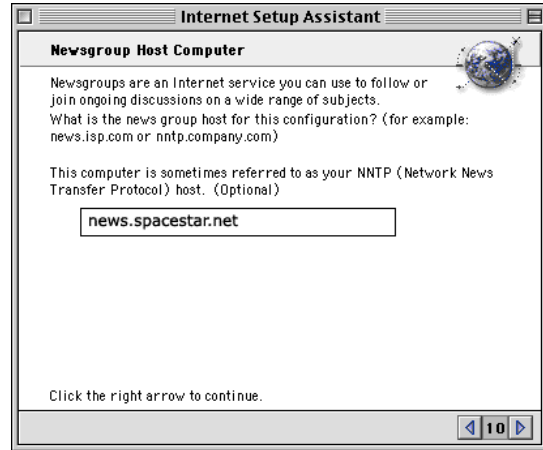

Enter the following for the outgoing mail server:  
**smtp.spacestar.net**

Setting up your news server. This will allow you to use newsgroups. Spacestar offers many newsgroups, for a variety of interests. Set your news server as follows:

**news.spacestar.net**

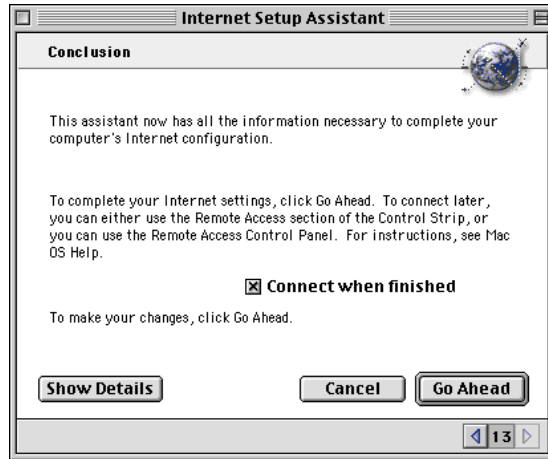

When you have finished this, click the right arrow to continue.

Click no for the option to use a proxy server. You have now completed the setup. You will be prompted to connect right away, or go back to another application and connect at a later time.

**Step 7: Finished**

You have just completed the steps to create a dialup connection to Spacestar. You can connect now, or do so later.

If you need basic start up software, more setup information, or are having trouble logging on, please contact us.
